372 unique articles this week

## NOTICE

Beginning this week there are a few changes (I hope that you will consider them improvements) with SafetyLit. Until now, SafetyLit presented titles and abstracts only in the English language – even when the original publication was in another language. We now provide titles and abstracts both in English and the original language. From now forward all newly added records will be multi-lingual. We have started the process of retroactively editing SafetyLit records to add original language titles to all non-English articles. This should be completed by the end of May 2012.

You will notice several other improvements as the changes are added over the next few weeks. Among these will be better guidance to enable finding full text articles; improvements to MySafetyLit, automatic updates of saved searches by RSS and more.

The automated system for inserting volume, issue, and page numbers (when they become available) to records that were added as "ePub Ahead of Print" status is working again. The backlog of ePub article records has been eliminated.

I apologize for one problem that arose this week. Articles from journals that are under copyright by an entity other than the publisher normally list both the copyright holder and the publisher. This week, only the publisher name is listed. This will be corrected for future Update Bulletins. The correct copyright credit will be listed with the html versions of each title.
